

Best Tips for Operating the BUNN High Volume Brewer

October 25, 2021

Best Practices for BUNN High Volume Brewer

- ❖ Ensure that you are using the correct paper filter - **WRIN-01338-000**. This paper filter IS NOT provided with the brewer. You need to order this from your preferred Supply Chain.
- ❖ When cleaning your server, make sure to NOT SUBMERGE the server in water as this can damage the electronics and potentially cause your server to fail. This failure WILL NOT be covered by warranty.
- ❖ For information on cleaning/operations/service, scan the QR code on the brewer as this will take you to the McDonald's EIS website where all the above information is available for viewing or download.
- ❖ To keep the server sight gauge clean and clear of coffee stain and cloudiness, DO NOT USE the nylon bristle brush. To clean the server sight gauge, use the BUNN foam cleaning brush that is supplied with your server. If you do not have this foam cleaning brush, contact your preferred Supply Chain provider.
- ❖ Make sure to follow the McDonald's daily and weekly cleaning/calibration instructions. These instructions can be found by scanning the QR code on the brewer.
